Lite Beer is really Diet Beer. I think beer cans stand tall with duct =
tape ad WD-40 as essential items for the home survival kit.

Which category would you rate a transceiver "O.S.-S.R."?
Its not an: Oversea Sender/Receiver as thought first.

Louis Meulstee set me straight, it's for: Out Station- Sound Ranging.
It is a British manufactured five channels transceiver, same size
as WS19, with two large Mic. terminal posts.
I am curious as how many members of this group have one?
Andre

Well, I will tell you Tom, I took a electronics course in high school-
1971-73. Teacher had build, from scratch, a D'arsonval meter movement.
That was a fun project. I recall making a pointer from a broom brush-
yes a single strand from a broom. Hardest part was to wind your own
coil from #40 magnet wire! But it worked. Russ.

For an excellent description of rebuilding a D'arsonval meter movement
(all hand made tools) see

<<http://www.jogis-roehrenbude.de/Roehren-Geschichtliches/Roe-Pruefer/TV-7-Restauration/TV-7-Restauration.htm>>

Best to view via Babelfish translation site unless German is one of your
languages. I particularly liked the part where he had hand wound 690
turns of #50 wire on the bobbin of a planned 710 turns and the wire broke!!!

73, Garey - K40AH

Our coil winding machines were all German-made.

The girls were from Puerto Rico.

The coil forms from Korea.

They were diversity movements.

Content-Type: text/plain; charset=windows-1252; format=flowed
Content-Transfer-Encoding: 8bit

Ahoy! An ancient-looking Central Electronics 20-A SSB exciter was delivered to my front porch yesterday by the US Postal Service. This unit was given to me by a museum! Upon unpacking, I discovered its rack-mount front panel was curved inward on both lower corners, no doubt as a result of mishaps in transit. While I feel sure I can flatten the front panel acceptably, I'd rather have the unit in an enclosed case. Is there a 20-A front panel or parts unit out there in reasonably presentable condition that I might use to replace the panel on this venerable beauty? Please contact me directly.

Thanks and 73,
Mike Steussy AE4R

HI Ken,

My book says the 6S6 has no direct substitute, and wouldn't you suspect that it has a 6v filament vs 5v for the 5U4? I didn't pull out the tube book

73,

Al, W8UT

I've had enough with the wrist rocket approach, and am ready to try the bow and arrow. Is a 10 lb 40" kid bow stout enough to haul line over a 80' tree?

That's the type I use and I bring it with me on family camping trips for this purpose. With 10-20 lb. fishing line as a leader, getting a slightly weighted arrow tip through 80-foot pines is no problem. The wrist-rockets just don't have the same degree of accuracy that one can obtain with a bow.

Gang-

!!!THIS INFORMATION HAS CHANGED!!!!

!!!SAVE THIS FILE FOR FUTURE REFERENCE!!!!

This periodic post is designed to help everyone gain more value from their boatanchors subscription.

Often I receive an email request, or I read on the list, of someone who is aware there is an archive available with some special files with special information that is of a more permanent nature than a post to the list, but who is unaware of how to retrieve these gems.

In the archives, there are cross-reference tables for Tubes, Military Equipment Nomenclature, suggestions for restorations and modifications to our beloved fire bottle rigs, and some wonderful stories of real adventures and the people involved.

These files may be accessed by the Web... quickly and easily.
These files can also be accessed by email.

For WWW access:

- go to <http://www.theporch.com>
- select "Mailing List Web Interface"
- on your first time there, click "Register For Full Account"
- follow the instructions, and BE SURE you use the email address that you have your BoatAnchors mail addressed to -- this interface will work ONLY for members of the list!
- Once registered, you can:
 - search the archives of previous posts (so far we haven't loaded all the previous posts online, but that is in the works;
 - download the index of files;

retrieve individual files
manage your subscription via the web interface

AWESOME!

For email access:

Step One:

send an email (leave the subject blank, or, if your mailer
requires a subject, type a single character, like "a" in
the subject box) to:

listproc@sco.theporch.com

Step Two:

in the body type:

index boatanchors

NOTE: The index **includes** all the previous articles now available
through the web interface, so the index is HUGE and difficult
to search -- the web interface is much easier.

Step Three:

after checking out the index for files of interest, and finding
the one or more you want to have sent to you, send another
email to:

listproc@sco.theporch.com

and, in the body, type:

get boatanchors file.name

where you substitute the name of the file from the index
for "file.name"

This should get you off to a good start. If you encounter any problems,
please let me know at the address below.

I finally got the Provisional Patent filed for my BPL work-around, Virtual Spectrum (tm). Server is up and running and everything is ready. Next step- some friends will help with tests- one in Europe, one in Australia and two in the U.S. There will be a low bandwidth and a high-bandwidth trail. First will stream a few KCs of 40 meters and include several CW messages at various frequencies, including a couple close together so we can figure the best levels without cross-talk. Next will be a high-bandwidth trial with CW, SSB, FM and some other mode yet to be decided, streaming about 40 KC of the band. Then, a live, continuous stream of the bottom 40 KC of 20 meters from my location, which will run for a few days. I hope they don't put BPL here in the mean time.

After these tests are concluded, the next step will be configuring for 2-way QSOs, which is just a matter of setting up the software and T/R switching. I ain't had this much fun with a radio project since I was a novice. :-).

Tom,
I am so glad you made a post on this. I was afraid I was the only one who thought this was an April 1st post.
For the benefit of us old vacuum tube folks, what in the world does "streaming" and "trail" mean? It would really help us who can't read patent applications to understand what this has to do with "Old Tube Radios".

Is this using a computer to send what someone hears in the lower part of 20 Meters over the internet to someone else who cannot hear it?

I operate 40 meter CW. How is this going to involve me?
